

**Problem 1. (6 points)**

In this problem, you will enter the unique quotient and remainder guaranteed by the division algorithm: write the quotient in the place marked *div* and the remainder in the place marked *mod* . For example, given the numbers 26 and 7, the division algorithm allows us to write  $26 = q \cdot 7 + r$  where  $q = 3$  and  $r = 5$ . Enter the value of  $q$  for  $26 \text{ div } 7$ . Enter the value of  $r$  for  $26 \text{ mod } 7$ .

$30 \text{ div } 8 = \underline{\hspace{1cm}}$ ,  
 $30 \text{ mod } 8 = \underline{\hspace{1cm}}$

$-21 \text{ div } 8 = \underline{\hspace{1cm}}$ ,  
 $-21 \text{ mod } 8 = \underline{\hspace{1cm}}$

$27 \text{ div } 5 = \underline{\hspace{1cm}}$ ,  
 $27 \text{ mod } 5 = \underline{\hspace{1cm}}$

$-21 \text{ div } 9 = \underline{\hspace{1cm}}$ ,  
 $-21 \text{ mod } 9 = \underline{\hspace{1cm}}$

$28 \text{ div } 10 = \underline{\hspace{1cm}}$ ,  
 $28 \text{ mod } 10 = \underline{\hspace{1cm}}$

$-28 \text{ div } 6 = \underline{\hspace{1cm}}$ ,  
 $-28 \text{ mod } 6 = \underline{\hspace{1cm}}$

$790465855 \text{ mod } 101 = \underline{\hspace{1cm}}$

$686169072 \text{ mod } 101 = \underline{\hspace{1cm}}$

**Problem 2. (6 points)**

Compute the remainder when the following large integers are divided by the given divisor. That is, find  $r$ .

$378573817 \text{ mod } 10 = \underline{\hspace{1cm}}$

$715005983 \text{ mod } 10 = \underline{\hspace{1cm}}$

$648269910 \text{ mod } 100 = \underline{\hspace{1cm}}$

$154422942 \text{ mod } 100 = \underline{\hspace{1cm}}$

$638230173 \text{ mod } 101 = \underline{\hspace{1cm}}$

$619845384 \text{ mod } 101 = \underline{\hspace{1cm}}$

**Problem 3. (3 points)**

What are the greatest common divisors of the following pairs of integers?

(a)  $2^3 \cdot 3^2 \cdot 5^5$  and  $2^3 \cdot 3^2 \cdot 5^4$

Answer =                     

(b)  $2 \cdot 3 \cdot 5 \cdot 7 \cdot 11 \cdot 13$  and  $5 \cdot 7^3 \cdot 11^{10} \cdot 17$

Answer =                     

(c)  $2^3 \cdot 7$  and  $5^2 \cdot 13$

Answer =

**Problem 4. (2 points)**

Compute:

$$\gcd(72, 38) = \underline{\hspace{2cm}}$$

Find a pair of integers  $x$  and  $y$  such that  $72x + 38y = \gcd(72, 38)$

$$(x, y) = ( \underline{\hspace{1cm}}, \underline{\hspace{1cm}} )$$

**Problem 6. (6 points)**

Use the Euclidean algorithm to find the greatest common divisors of each pair of numbers below.

$$\gcd(1357, 2419) = \underline{\hspace{2cm}}$$

$$\gcd(901, 1961) = \underline{\hspace{2cm}}$$

$$\gcd(527, 799) = \underline{\hspace{2cm}}$$
