

```
Corollary (4) S.4 ( & wrollary 2.4)
           两个 congruence class modulo pin)
             either disjoint or identical
Corollary (5) 5.5
        全F为field. p(x) ∈ F(x), (legree 为n.)
                                   BP f(x) = 9(x) p(x) + r(x)
    (1) If fox & F(x) 且 ron 方for 被 pox divide
               By the remainder ) [f(x)] = [r(x)] = x
   (显然)
    (2) 全了为包含OF和FIN中所有degree Sn AS
               polynomial & set
                        - AP: S= (Op) UKfoN=FEN degfon ≤n}
         一 FEX) 中每个p(x) bis congruent class
  注:
                都是S o其上 polynomial bis congruent dass
就像四中每个
wo ox un T ox / 并且 S p , 每十 different polynomial 都有
是(v)1,...,n-1)中新 int has distinct congruence class.
confinence das, 且这个5℃每个elem 的 confinence
```

dato 都distinct, 也就是一个元素任意一个 congruent dato,

covering every congruence class

Def 3 The set of all congruence classes modulo p(x) on F(x) is denoted by: 5 Zn美比, Zn 把 Z 分为 n T congruence classes. 而 FLX/(pxx) 地 FLX] \$ 为 J[S] 才 可能 infinites S = {of} U (fore FEX) deg for < n} congruent classes. FCN/(p(N) = [[fin]p(N) fin) es? Thm 6 5-6 (B) Thm 5.2, 5.3 8-4 (kit) 表[fin]pon=[gin]pon,[hin]pon=[kin]pon € FGJ/Cprxx). $PU(1)[f(x) + h(x)] = [g(x) + k(x)]_{p(x)}$ (2) [f(x) h(x)] = [g(x) k(x)] p(x)

Def 4 + 40 x in FEX/(PLX)/

+: [f(x)] + [g(x)] = [f(x) + s(x)] p(x)

X: [fix) più [gix) pix = [fix gix) pix

Thm 55.7

EFA field. PX & FLX LAS non const polynomial.

= FCX/(p(x)) \$ -t commutative nhp.

BF(X)/(p(x)) - it is -t subring F*

which is isomorphic to F.

这是一种转结也。实际上下EF[x]/p(x), Flage是 F(x)/(p(x)) 的 subring.

Thm (8) 5.8

至F为 field. p(x) 为F[x)上的 non const polynomial.

[F(x)/(p(x)) 为一个 commutative ring 且 F的其一个 subning.

「結定-4 field F、新加总是版构造的-4厘大的 ring。 包括包含-4 subning、FLD、FLD/O(の)都是。

Thm 19 5.9

Få field. pan = Fin at const.

一 表 f(x) e F(x) 且 f(x), p(x) relatively prime.

(gcd \$ 1 F)

(f(x)) (gx) 65 - f (mit.)
